## Sound Soakers hit the market with a high note!

Introducing a revolutionary new concept for aquatic environments from Waterplay.

What are Sound Soakers? A giant piano and horn that children can play. Ground sprays with entirely customizable sounds. Lilly Pads that spray water. Sound fun? Read on.

How do they work? When water sprays from the nozzle, a child can put their hand over the nozzle to block the flow of water. This triggers a signal to the controller, which then plays the corresponding note or sound. All sounds are programmed through an MP3 file so they are entirely customizable. Play a note, a song or a whacky sound – they'll love it!

### Musical Menu

- ◆ Piano lessons were never this fun! Tappin' Tunes is a giant piano where children can play music. It features an anti-slip surface and many children can play simultaneously. Get creative: we can provide custom graphics.
- ◆ Offer a refreshing sound experience with Toney Tube. This towering horn is a fun way for children to learn their notes, or surprise them with unique and unexpected sounds.
- ◆ Sound Spray is a round fiberglass disc that attaches to the top of a ground spray, and makes sound possible. Any custom graphic can be added to the top of the graphic plate as a mode for them in the play space. Sound Sprays are available without sound too – they are called Lily Pads. Sound Sprays and Lily Pads make excellent progressive educational tools.

Maestro Activator accompanies Sound Soakers. This attractive component functions as both an activator and speaker – we recommend one per component type.

**Offering a whole new level of interactive play - Sound Soakers-very cool.**
